

Automotive Technology

Program Description

Automotive Service Technology courses prepare students for careers not only in the automotive services industry, but also in engineering, skilled trades, and cutting-edge 21st century opportunities. The latest service and diagnostic equipment, coupled with highly qualified instructors, provides students with a phenomenal opportunity to begin career preparation while in high school. Auto programs offer nationally recognized Automotive Service Excellence (ASE) in maintenance and light repair (MLR) as well as brakes, suspension and steering, electrical and engine repair.

Automotive Technology students are self-motivated and yield technical skills that are employable directly out of high school. They exercise the practical use of mathematics, reading, and science while diagnosing, servicing, and completing vehicle service.
